1 August 2019

UNIVERSITY OF PÉCS MEDICAL SCHOOL MIGRATION HEALTH PROGRAMS

Chair of Clinical Infectology and Migration Health at the University of Pécs Medical School was established in 2007 to act as main facilitator of 'Migration Health' in Hungary and in the surrounding EU region. Since its establishment strong academic and political links and partnerships have been established across Europe to strengthen cooperation among interested partners. This is a new multidisciplinary field of health sciences with emerging importance and the department at Pécs has the most comprehensive expertise of it. By its virtue, this department is the main facilitator in several projects and taking the role either of developer and applicant / coordinator or partner as well.

SPECIALIST IN MIGRATION HEALTH

a new postgraduate training course

UNIVERSITY OF PÉCS
MEDICAL SCHOOL
MIGRATION HEALTH PROGRAMS

New postgraduate training course: SPECIALIST IN MIGRATION HEALTH

ADDRESSING NEW CHALLENGES IN EUROPE

The aim of the Specialist in Migration Health postgraduate training course is to provide further education possibility on a field of rapidly growing importance that currently is still missing from the national and international educational sphere. We will train professionals empowering them with a multidisciplinary knowledge and skills around the health/public health aspects of migration.

The course covers a number of fields like direct health assistance, healthcare/ health care system planning at a 'migrant sensitive' way, health policy, adapted sociology and economics/ health economics and the importance of intercultural competences.

The knowledge and competences obtained during the training are sufficient to fulfil and solve the special healthcare needs of migrant individuals and communities (foreign workers, asylum seekers,

victims of trafficking in human beings, ethnic minorities, etc.) The training course aims to contribute to the smooth and successful integration of migrants and other populations who have landed on a social periphery.

The course has gained already the full support of WHO European Office.

THE CURRICULUM

The postgraduate training course responds to the need for special additional knowledge, skills and competencies around the following three complex subject groups:

1. Fundamental knowledge in epidemiology, bio statistics and demography, public health medicine, health policy and economics, leadership skills, health ethics and law, health sociology and psychology.
2. Fundamental knowledge in research methodology, planning, organizing and managing healthcare systems, project management, community health and health promotion, intercultural competence, communication skills.
3. Practical application of knowledge and skills: healthcare and sociocultural needs of migrant communities, migrant-sensitive healthcare system, occupational health aspects of migrant workforce, ethnic specific therapy, geographical epidemiology/ morbidity profile (both communicable and non-communicable diseases) of sending and host countries, health/ public health impact of mass migration.

INTERNSHIP

A compulsory professional internship and research work is connected to the training program that should be completed in the fourth semester.

The professional internship is strongly attached to the thesis work of the participants, its duration is minimum 6 weeks, its localities should be professional institutes, migrant reception centers, NGOs that deal with the healthcare of migrants and national healthcare institutes.
